Standard Heater Fence Assembly Manual

Step 1: The heater fence kit will come banded in stretch wrap, remove the wrap and place the three pieces on your working surface. Match the front piece, and one side as shown below.

Step 2: Turn over matched pieces so the long section is face down. Ensure the boards are flush in the top corner for optimal fitment. Attach the two pieces together using the two predrilled holes and remaining screws from your sauna hardware kit. It is recommended to keep pressure on the two square boards during fastening for easier assembly. Then repeat process for other side.

Step 3: To install heater fence into sauna, use the four predrilled holes and screws from sauna hardware kit. Place fence around heater and fasten into side and front wall panels.
